

WAREHOUSE AND MATERIAL HANDLING

SAFETY CHECKLIST PART IV: FORKLIFT-SPECIFIC

The Ultimate Checklist

TO ENSURE WAREHOUSE SAFETY

The rate of fatal injuries in warehouses is higher than average across all U.S. industries. That's according to OSHA — the U.S. Occupational Safety and Health Administration.

AND WHAT IS OSHA'S #1 SAFETY CONCERN?

The unsafe use of forklifts. That's because the most frequent OSHA safety violations in warehouses are lift truck accidents.

So what can you do to reduce the risk of accidents and injuries in your warehouse? And, especially, how can you avoid forklift safety incidents?

ELOKON, a global leader in automated forklift safety technology, has compiled this comprehensive Warehouse Safety Checklist, per OSHA guidelines.

Our Warehouse Safety Checklist has four parts:

OVERALL WAREHOUSE SAFETY

HAZARDOUS MATERIALS SAFETY

GENERAL MATERIALS HANDLING SAFETY

FORKLIFT-SPECIFIC SAFETY

For more information on ELOKON's safety technology, please visit https://www.elokon.com/en-US/.

Ensure all industrial vehicles (forklifts/lift trucks) meet the design and construction requirements of the American National Standard for Powered Industrial Trucks, Part II ANSI B56.1-1969. Ensure any modifications to industrial trucks that might affect their capacity or safe operation have the truck manufacturer's written approval. Ensure that the nameplates and markings required on industrial trucks (including specifications and capacity) are legible and properly placed.

• Understanding site-specific hazards (e.g., low doorways, slippery surfaces, intersections, and pedestrian traffic areas).

Train all industrial truck operators to use equipment safely, as required by OSHA regu-

lation 29 CFR 1910.178. OSHA particularly emphasizes training lift truck operators on:

· Using a seatbelt.

04

- Understanding capacity ratings, center of gravity (as affected by lift height, gradients, and cornering speeds), fork load stability, and rules for lifting/dropping/stacking loads.
- Obeying traffic regulations, including speed limits (OSHA recommends 5 mph), maintaining clear view of travel path, slowing at aisle intersections, sounding horn while cornering, etc.
- Maintaining safe distance from edges of ramps, platforms, docks, truck beds, railcars, etc.
- Maintaining sufficient headroom above raised forks/loads (e.g., under overhead lights, pipes, and sprinklers).
- Leaving a lift truck unattended ONLY after the forks are down, controls neutralized, power shut off, and brakes set.
- Prohibiting any "stunt driving" or "horseplay."

FORKLIFT-SPECIFIC SAFETY CHECKLIST Ensure that industrial trucks that handle hazardous materials are properly approved 05 and marked for such use. Ensure that all industrial truck operators are at least 18 years old, and that only properly 06 trained, authorized operators have access to industrial trucks, as stipulated by OSHA rules. Re-evaluate/recertify each industrial truck operator at least once every three years, 07 including re-licensing and medical clearance as applicable. Conduct refresher training for industrial truck operators whenever: they have an accident 80 or near-miss incident; they use a vehicle in an unsafe manner; they are assigned to drive a new type of truck they are not trained on; any workplace conditions change that might affect safe truck operation. Implement policies and procedures for performing OSHA-mandated safety inspecti-09 on checklists on industrial trucks before they are placed into service. And establish consequences for failure to do so. OSHA particularly emphasizes the good working condition of overhead guards to protect lift truck operators from falling objects. Implement policies, procedures, and discipline processes for operators who have acci-10 dents and/or near misses. Implement policies and procedures for safely refueling diesel and LPG industrial trucks. 11 OSHA especially emphasizes refueling only with truck engine off, and proper handling of LPG cylinders.

FORKLIFT-SPECIFIC SAFETY CHECKLIST

Implement policies and procedures for safely charging batteries for electric industrial 12 trucks. OSHA particularly stresses limiting charging to designated areas, providing adequate ventilation, protecting chargers from truck collisions, neutralizing electrolyte spills, and preventing/extinguishing fires.

_	-	
_		

Implement policies and procedures for maintaining and repairing industrial trucks, 13 including cleaning vehicles, replacing worn tires, using only parts that meet the safety specifications of the original truck design, and taking trucks out of service for unsafe conditions.
