ELOfleet

ELOfleet Smart by ELOKON
Smarter Fleet Management Starts Here

ELOfleet is a next-generation fleet management system that brings together driver accountability, real-time productivity insights, and automated safety checks: all through an intuitive smartphone interface mounted directly to each forklift.
Designed for mixed-brand fleets and scalable across facilities, ELOfleet Smart reduces costs, improves safety, and gives you full visibility into daily operations, all from a single cloud-based platform.

The ELOfleet Smart Advantage

- **Stronger Operator Responsibility:** Access control, checklists, and shock detection encourage safer driving and reduce damage.
- **Data-Driven Productivity Gains:** Track usage, idle time, and login data to optimize fleet size and operator efficiency.
- **Cloud-Based & Facility-Wide Access:** Access your fleet dashboards from any device, on-site or off, with no software installs required.
- **Proactive Maintenance Management:** Prevent breakdowns with scheduled alerts, digital service records, and auto-lockouts.
- **OEM-Independent Flexibility:** Manage all your forklifts, regardless of manufacturer, on one unified system.

How It Works: Smart Features in Action

- **Smartphone Interface:** Permanently mounted to each truck, the device gives drivers a direct, intuitive interaction point.
- **RFID/NFC Access Control:** Only trained operators can start a truck. Unauthorized use is blocked automatically.
- **Pre-Op Electronic Checklist:** Configurable daily checklists required at login. Trucks with reported faults can be auto-disabled.
- **Driver Messaging:** Safety alerts and personalized notifications are displayed directly on the smartphone screen.
- **Impact Detection System:** Built-in shock sensors classify impacts (light, medium, heavy) and trigger customized safety responses such as engaging creep speed or locking the truck.
- **Productivity Monitoring:** Tracks travel time, idle time, login durations, and seat sensor data for anonymous or personalized analysis.
- **Preventive Maintenance Alerts:** Tracks service intervals and disables trucks when overdue. No manual tracking required.
- **Cloud Dashboard:** Visualize KPIs, drill down into individual truck data, or compare performance across departments or sites.

Built for Demanding Fleets

- **Industrial-Grade Design**: Engineered in Germany for durability and high reliability across any worksite.
- **Flexible Hosting**: Use ELOKON's secure cloud or deploy on-premise—your choice.
- **Scalable Architecture**: Supports fleets of any size, in any location, with cross-facility data visibility.
- **Seamless Integration**: Connects with **ELOshield, ELOfusion**, and other ELOKON systems for a unified control layer.

Why Choose ELOKON?

- **ELOKON** is a trusted partner to 1,000 companies worldwide, offering:
- **Universal Compatibility** Works with any forklift brand for effortless integration.
- **Proven Industry Leader** The widest safety and telematics portfolio in the market.
- **Global Support Network** Offices in the USA, Germany, and Poland for world-class service.
- **Relentless Focus on Safety & Efficiency** We engineer future-proof solutions that minimize risk and maximize productivity.
